

AS67KW-01US

automotive interior

AS67KW-01US is a molded in color material that was developed for automotive interior applications. This material has excellent cold temperature ductility and is used on applications which come in contact with airbag deployments. This resin has been designed to be laser scorable and has the highest scratch resistance for improved surface durability. This product is molded in color and has been matched to many of the OEM colors. As with most olefins, the applications are sound dead and reduce noise from squeak and rattle.

key material advantages

- Scratch and Mar Resistance
- Stiffness/Impact Balance
- Similar Shrinkage to Engineering Alloy Equivalents
- Chemical Resistance
- Weatherability
- Low CLTE
- Reduced Noise
